

Formula for Selecting Regional Representatives for “A” Provincial Championships

Western Region:

The team with the highest % will represent the region at provincials. This % will consist of three categories which are as follows:

a) Winning % in tournament play against common opponents - % against each opponent calculated individually, minimum 2 opponents (worth 50% of total score) **

* If there are not 2 opponents, we will use the wildcard formula as posted on the ORA website, without the multiplier for out of region.

** This is only against out of region teams, as every team must have played against them

*** This includes tournaments up until the declaration date.

b) Head to Head winning % between teams in region during tournament play, % against each opponent will be calculated individually (worth 25% of total score)

c) Winning % against remaining teams in your WORL loop, % against each opponent will be calculated individually (worth 25% of total score)
